

Soybean Molasses min. 75% dry matter

(Product code LQS-SBZ4SP75)

SOYBEAN MOLASSES is an important commercial and biological product, and a source of phytochemicals and soy sugars. The product is non- GMO.

Description:

Color:	dark brown
Flavor:	typical
Odor:	typical
Consistency:	typical-dense
Bulk density (g/ml):	1,2 – 1,3 (2)
Energy value:	914kJ(259kca)/100g (3)

Quality management: Identity Preserved Program / Traceability

Relevant identified uses:

Industrial source of soy phytochemicals (e.g. isoflavones) and soy sugars, feed ingredient, as a fermentation aid/substrate, as a prebiotic, as an ingredient in specialized breads, stabilizer, possible use as plywood adhesive

Chemical Parameters

Parameters	Unit	Typical	Guarantee	
Protein (N x 6,25), dry base	%	6,00	max 8,0	(1)
Dry matter	%	75,0	75,0 +/- 5	(1)
Fat, dry base	%	4,5	max. 5,0	(1)
Carbohydrates	%	50,0 by difference		(1)

Microbiological Parameters

The number of aerobic bacteria	max. 50.000/g	(1)
Salmonella	negative in 25 g	(1)
Yeast and molds	max. 1.000/g	(1)

Heavy Metals

Parameters	Unit	Typical	Guarantee	(2)
Lead, Pb	mg/kg	2,0	max.10	(2)
Cadmium, Cd	mg/kg	0,01	max 1,0	(2)
Mercury, Hg	mg/kg	0,001	max. 0,1	(2)
Arsenic, As	mg/kg	0,015	max. 2	(2)

Periodical Analysis

Parameter	Unit	Guarantee	
Fiber, dry base	%	max. 1,0	(2)
Ash, dry base	%	max. 12,0	(2)

(1) CoA (2) Periodical analysis (3) Calculated

General information:

Soybean molasses is produced by aqueous ethanol extraction of white flakes and with addition of propionic acid and ammonium propionate.

Soybean molasses is a co-product of the soya protein concentration production, In a special extraction process part of the carbohydrates present in soya beans are extracted and concentrated to viscous liquid product. The dry matter content of soya molasses is around 60 %. Most of the carbohydrates in soya molasses are oligosaccharides (abt. 32%). Around 6 to 6,5 % of the product consist of sucrose. The stachyose level in the product is 3 %.

Soybean molasses can be used in all types of feed for ruminants and any level of incorporation in the feed. Stachyose and raffinose cannot be digested by single stomach animals, for instance pigs and poultry. Soya molasses should therefore not be used in feeds for poultry (broilers and laying hens) and in feeds for piglets younger than 12 weeks.

In feeds for grower and finisher pigs soya molasses may be used at levels of up to 2 % of the total feed. For pelleted feed for cattle and horses normally 5 % of soya molasses is used whereas in liquid feed for such animals up to 50% of soya molasses can be added.

Nitrogen content is based on dry matter from 0,64 % to 1,3 % on the basis of statistical data.

Packaging and Transportation:

Shelf life: Six months in storage conditions recommended by the manufacturer.

Packing: Molasses is delivered in bulk.

Transport: Transport in clean and dry tanks with heaters.

Storage: Storage molasses requires clean and dry tanks of acid resistant material, protected from outside impacts. During periods of storage, can come to a layering and solidification, which is why it is recommended periodically mixing the same. The product might regain its initial consistency

without losing functionality after being heat treated. Exposure to low temperature might cause the product to become more firm. Avoid extreme exposure to light and humidity.
